THE MASTERWORKS OF STRUCTURAL ENGINEERING

MIDAS IT always strives for constant growth and progress with midas users who have made us a trusted leader in technology.

This project application book was published by MIDAS IT, but what MIDAS IT did was just collecting the masterworks of midas users. This book is dedicated to the midas users without whom it would not exist.

MIDAS IT will keep providing the world with utilitarian values that support human pursuit of happiness with our creative technology.

Burj Khalifa

Dubai, UAE

Owner	Emaar Properties
General Contractor	Samsung C&T
Architect	Skidmore, Owings & Merrill
Engineering Consultant	MIDAS IT / Skidmore, Owings & Merrill / Arcadis
Construction Period	2004 - 2010
Type of Project	Mixed-use Building
Size of Structure	829m Height (164-story)

midas **Gen**

Main features used in this application

- Construction stage analysis with creep and shrinkage
- Linear static analysis with plate and wall elements

Description on this project

The Burj Khalifa is a mega-tall skyscraper in Dubai, United Arab Emirates. With a total height of 829.8m, the primary structure is reinforced concrete. It is designed to be the centerpiece of large-scale, mixed-use development. The design is derived from the Islamic architecture of the region, such as in the Great Mosque of Samarra. The Y-shaped tripartite floor geometry is designed to optimize residential and hotel space. A buttressed central core and wings are used to support the height of the building. Although this design was derived from Tower Palace III, the Burj Khalifa's central core houses all vertical transportation with the exception of egress stairs within each of the wings. The structure also features a cladding system which is designed to withstand Dubai's hot summer temperatures.

MIDAS IT

Address	MIDAS IT Tower, 17, Pangyo-ro 228 beon-gil, Bundang-gu, Seongnam-si, Gyeonggi-do, 13487, Korea

Libeskind and Hadid Tower

Milan, Italy

Owner	CityLife
General Contractor	CMB
Architect	Zaha Hadid and Daniel Libeskind
Engineering Consultant	Redesco Progetti
Construction Period	2014 - 2017
Type of Project	Mixed-use Building
Size of Structure	<ul style="list-style-type: none">• Hadid Tower 170m Height (44-story)• Libeskind Tower 175m Height (28-story)

Main features used in this application

- Construction stage analysis with creep and shrinkage
- Finite element model for slabs and walls

Description on this project

Hadid Tower The project is located at the intersection of several important urban axes. The sinuous profile of the rooflines repeats over the entire complex. The tower is conceived as a stack of equivalent, economically efficient floors slabs that incrementally twist about a vertical axis.

Libeskind Tower The curved tower's facade is made of sustainable, state of the art glass, that will reflect the public space below and vistas around. Libeskind tower is personally crafted and conceived to provide a sculpted and highly visible skyline on the site.

Redesco Progetti

Address via Gioberti 5, 20123 Milan, Italy

Introduction Redesco is a specialized structural engineering consultancy, whose first core was established in 1975. Merging broad vision with focused specialization, they simply design and enable outstanding structures. Also, they focus on structures, from conceptual design to site supervision.

Gate to the East

Suzhou, China

Owner	Suzhou Chinaing Real Estate
General Contractor	Shanghai Construction Group
Architect	RMJM
Engineering Consultant	East China Architectural Design & Research Institute
Construction Period	2004 - 2016
Type of Project	Mixed-use Building
Size of Structure	302m Height (71-story)

Main features used in this application

- Linear static analysis with P-delta effects
- Construction stage analysis with creep and shrinkage
- RC building design

Description on this project

The design for the Gate of the Orient is inspired by the combined Chinese traditions and western influences of the projects two lead designers. The result is a mix of westernized pure form and Chinese subtlety. The Gate of the Orient has drawn inspiration from the historic and cultural references of the traditional famous gardens of Suzhou and stands almost 300m high and sits directly above a major underground rail interchange, which is fully integrated into the building.

East China Architectural Design & Research Institute

Address	Block B 14/F, Huafu Building, 76 Shishan Road, Suzhou New Area 215011, China		
Introduction	ECADI is one of China's most influential architectural design institutions. Over the years, ECADI has designed projects for provinces and cities nationwide, and dozens of countries and regions as well. They have completed over 10,000 design and consulting projects, and cultivated many outstanding experts and talents including academicians and national design masters.

City Center and Hard Rock Hotel

Saint Juliens, Malta

Owner	Seabank Group
Architect	MYGG Architecture
Engineering Consultant	F&M Ingegneria / Arup
Construction Period	Under Construction
Type of Project	Mixed-use Building
Size of Structure	68,400m ²

Main features used in this application

- DFX import for irregular model generation
- Construction stage analysis
- Linear time history analysis for walk vibration

Description on this project

The City Centre complex includes 3 main facilities: two residential towers, one of where located in the east side (Tower A), and the other in the north (Tower B), and an hotel (Hard Rock Hotel) that are connected together by a podium with a shopping mall and a multi-level parking. The building consists of 4 main facilities with foundation at 0.5m, the podium consists of 6 floors and reaches 22.25m. At this level, the two towers and the hotel erect separately. Both towers have a circular footprint of 1,200m² and reach 162.85m height (35 floors), while the hotel building has a rectangular plan 24 x 150m and it reaches 94.40m height (19 floors).

F&M Ingegneria

Address	Via Belvedere 8/10 30035 Mirano, Italy		
Introduction	F&M Ingegneria is a leading Italian multidisciplinary practice of designers, engineers and specialist consultant with over 35 years of experience. The firm provides a wide range of design services in infrastructural, building, environment and project management. They work across all sectors from education and residential to transport, from arts to health and sports facilities.

Dongdaemun Design Plaza (DDP)

Seoul, Korea

Owner	Seoul Metropolitan Government
Architect	Zaha Hadid Architects
Engineering Consultant	SAM00 Architects & Engineers / Arup / POSTECH
Construction Period	2007 - 2014
Type of Project	Complex Mall
Size of Structure	85,000m ²

Main features used in this application

- Fibre reinforced concrete analysis
- Linear dynamic analysis with response spectrum

Description on this project

The DDP has been designed as a cultural hub at the center of Dongdaemun, a historic district of Seoul that is now renowned for 24-hour shopping and cafes. DDP is a place for people of all ages as a catalyst for the instigation and exchange of ideas and for new technologies and media to be explored. The variety of public spaces within DDP includes art/exhibition halls, conference hall, design museum/exhibition hall/pathway and ect. Like this, DDP is enable to present the widest diversity of exhibitions and events that feed the cultural vitality of the city.

SAM00 Architects & Engineers

Address	295, Olympic-ro, Songpa-gu, Seoul, 05510, Korea
Introduction	SAM00 Architects & Engineers is a global architecture company which provides a total solution covering from architectural, urban, interior, sustainable design to engineering. Since 1976, SAM00 has completed about 8,000 projects. The more than 100 award winning records explains SAM00's design competence which has been refined throughout the last 40 years.

Dubai Pearl Project

Dubai, UAE

Owner	MGM Mirage
General Contractor	Al Habtoor Leighton Group
Architect	Schweger Associated Architects
Engineering Consultant	e-Construct
Construction Period	Under Construction
Type of Project	Mixed-use Building
Size of Structure	300m Height (73-story)

Main features used in this application

- Construction stage analysis with creep and shrinkage
- RC building design as per ACI318

Description on this project

The building is a world class, mixed-use, 6,700km² (22million ft²) integrated development by Pearl Dubai FZ LLC. The development will ultimately provide a home for approximately 29,000 people. Dubai Pearl's initial handover is scheduled to commence in 2018.

e-Construct

Address Suite 203, Building 4 Dubai Internet City P.O. Box 500288 Dubai, UAE

Introduction e-Construct is an engineering firm that is focused on providing cost effective engineering solutions to design bridges, high-rise buildings, precast concrete engineering and post-tensioning design.

Shanghai Center Building

Shanghai, China

Owner	JOINT VENTURE ASTALDI - FCC
General Contractor	Shanghai Central Building Construction and Development
Architect	Gensler / Tongji Architectural Design Group
Engineering Consultant	Thornton Tomasetti
Construction Period	2008 - 2015
Type of Project	Mixed-use Building
Size of Structure	632m Height (124-story)

Main features used in this application

- Construction stage analysis with creep and shrinkage
- Linear dynamic analysis with response spectrum
- Equivalent wind load simulation

Description on this project

At 632m, Shanghai Tower became China's tallest building and the second tallest building in the world in 2015. The mixed-use development comprises 380,000m² and includes Class A office space, retail, a luxury hotel, 2,200-seat arena, and connections to the Shanghai Metro and three floors of below-grade parking. It also features the world's highest non-enclosed observation deck. The tower features a twisting triangular form with a façade that curves 120 degrees from its base. Its structural system consists of a 90-by-90-foot concrete core connected to a system of outriggers and super columns supported on 1,079 concrete and steel bore piles driven deep into ground. The outrigger trusses and super columns derive stiffness from the concrete inner building, comprising an effective system for resisting wind and seismic loads for supertall buildings.

Thornton Tomasetti

Address	398 Han Kou Road Room 1601, Shanghai 200001, China
Introduction	Thornton Tomasetti is an American 1,200+ person structural engineering consulting firm headquartered in New York City. The company has expertise in structural engineering, façade engineering, forensics, renewal, construction engineering, property loss consulting, sustainability, applied science, protective design and transportation.

Hanoi Landmark Tower

Hanoi, Vietnam

Owner	AON BGN
General Contractor	Kyungnam Enterprise
Architect	Heerim Architects & Planners
Engineering Consultant	Dong Yang Structural Engineers / MIDAS IT
Construction Period	2008 - 2012
Type of Project	Mixed-use Building
Size of Structure	349m Height (72-story)

Main features used in this application

- Construction stage analysis with creep and shrinkage
- RC building design

Description on this project

Upon completion in 2012, it was the tallest building in Vietnam and was a redefining moment for the city of Hanoi, which at the time had very few tall buildings. The 72 story building is comprised of offices and is the tallest in a three building complex featuring two 49 story residential towers with curved facades to maximize views. In order to construct the complex in the soft soils of Hanoi, 980 piles with diameters of up to two across are drilled deep underground in a process which took longer than one full year during the construction phase. The reinforced concrete frame of the 72 story tower utilizes post-tensioning which allowed the structure to rise as quickly as of one floor every five days, a rate which is faster than what would have occurred with conventional construction techniques.

Dong Yang Structural Engineers

Address	7 Beopwon-ro 11-gil Tower C Suite 1101, Songpa-gu, Seoul 05836, Korea		
Introduction	Dongyang is a Korean engineering firm with technical know-how in structural design, maintenance inspections, management, and BIM. Over the past 30-plus years, Dongyang has participated in and collaborated on a wide variety of projects, focusing primarily on high-rise building projects, optimizing systems in consideration of economic feasibility and constructability.

Guangzhou Twin Tower

Guangzhou, China

Owner	Guangzhou Plan Government
General Contractor	Guangzhou Municipal Construction Group / China State Construction Engineering
Architect	Wilkinson Eyre Architects
Engineering Consultant	Arup / South China Design Institute
Construction Period	2006 - 2010
Type of Project	Mixed-use Building
Size of Structure	438m Height (103-story)

Main features used in this application

- Construction stage analysis with creep and shrinkage
- Linear dynamic analysis with response spectrum

Description on this project

It is a tower which defines the emerging international strength of China's third largest city and serves as a landmark for Guangzhou Zhujiang New Town's main axis, which links the commercial district in the north with the Pearl River to the south. Its elegant simplicity belies the complex geometry of form and structure which makes it possible. Each of the three façades of the curved triangular plan is also curved in section with a radius of 5.1km set out asymmetrically with the widest point at a third of the height, tapering to its narrowest point at the top. There is no spire, and the three curved façades continue up beyond the highest floor and, in some views, seems to disappear to infinity. The inside of this atrium, with its crystalline geometry, sparkles with abundant daylight.

Arup

Address	Room 1301, Tower A Center Plaza 161 Linhexi Road Tianhe District, Guangzhou 510620, China		
Introduction	Arup is a multinational professional services firm headquartered in London which provides engineering, design, planning, project management and consulting services for all aspects of the built environment. The firm has over 14,000 staffs based in 92 offices across 42 countries, and has participated in projects in over 160 countries.

Zhongguang Guanggu Star - Zhongjian Courtyard

midas Gen

Wuhan, China

General Contractor Central-Southern China Engineering Consulting and Design Group
Engineering Consultant CITIC
Construction Period In Design Phase
Type of Project Mixed-use Building
Size of Structure 87m Height (21-story)

Main features used in this application

- Nonlinear dynamic analysis with plastic hinges
- Steel frame design

Description on this project

Zhongguang Guanggu Star is located in the East Lake High-tech Zone. It includes Administrative service center, Wuhan Science and Technology Exhibition Center and the Provincial Science and Technology Museum. It was built in the area of 67,000m².

CITIC

Address Capital Mansion, 6 Xinyuannanlu, Chaoyang District, Beijing 100004, China

Introduction Founded in 1952, CITIC is one of the large state-owned design agencies in China. Also, the firm has certified one of the top engineering company in China with qualified certificates. With those qualification, they can operate design projects of commercial inside and outside the ministry.

Taipei Twin Tower

midas Gen

Taipei, Taiwan

Owner Taipei City Council
General Contractor Joint Development Projects
Engineering Consultant Evergreen Consulting Engineering
Architect Fumihiko Maki
Construction Period Under Construction
Type of Project Mixed-use Building
Size of Structure 332m Height (76-story)

Main features used in this application

- Construction stage analysis
- Steel frame design as per TWN-LSD

Description on this project

Taipei Twin Tower is a supertall skyscraper development in Taipei, Taiwan. It includes two skyscrapers (C1 and D1). When completed, it will be the 2nd tallest building in Taipei. The basement of C1 will be the terminus for the Taoyuan International Airport Access MRT System.

Evergreen Consulting Engineering

Address 10F, 63 Anhe Rd. Sec. 2, Taipei 106, Taiwan

Introduction Evergreen Consulting Engineering mainly provides structural engineering services. Evergreen is ranked No. 10 in a list of 'top structural engineers - design' by CTBUH, since they designed Taipei 101 and T&C Tower 85 in Kaohsiung listed in the world's tallest 100 buildings.

Sai World City

midas Gen

Panvel, India

Owner	Paradise Lifespaces
General Contractor	Bhavika Enterprises
Architect	Dimensions
Engineering Consultant	Structural Concept
Construction Period	Under Construction
Type of Project	Mixed-use Building
Size of Structure	120m Height

Main features used in this application

- Frame + shear wall system building
- RC design as per IS 456 & 1893

Description on this project

The structure known as Sai World City is spread across 43 acres with 13 towers of 40 story each. The structural system is a combination of shear walls and columns. The slab cycle achieved is of 7 days.

Structural Concept

Address	803, Maithali's Signet, Sector 30A, Vashi, Navi Mumbai, Maharashtra, 400705, India		
Introduction	Structural Concept Designs was established in 2001 at Navi Mumbai. The firm provides a full range of structural engineering services from concept to construction. Also, the firm helps in creating high performance and durable concrete aids in and economical structures.

Yeouido S-Trenue

midas Gen

Seoul, Korea

Owner	SK Networks
General Contractor	SK E&C
Architect	Mass Studies
Engineering Consultant	Junwoo Structure
Construction Period	2006 - 2009
Type of Project	Mixed-use Building
Size of Structure	154m Height (36-story)

Main features used in this application

- Construction stage analysis with creep and shrinkage
- Composite action for SRC columns
- Wall elements for core walls

Description on this project

located in Yeouido, the building maximizes its allowable height, giving the tower a challenging slenderness ration of 1:8. The core tower is of reinforced concrete construction whilst the two side towers are steel. With the core tower at the center, the slimmer steel construction towers lean at varying angles but maintain structural soundness.

Junwoo Structure

Address	2F Bokrim Building, Dogok 1dong 543-4 Gangnam-Gu, Seoul, Korea
Introduction	Junwoo Structure was found in 1987 and specialized in high-rise building and large scales building. It has more than 800 experiences in the field of structural design as well as ones of abroad projects.

Unicredit Tower

Milan, Italy

Owner	INES ITALIA SGR SPA
General Contractor	COLOMBO COSTRUZIONI S.P.A.
Architect	Pelli Clarke Pelli Architects
Engineering Consultant	MSC Associati
Construction Period	2008 - 2012
Type of Project	Office Building
Size of Structure	230m Height (37-story)

Main features used in this application

- Construction stage analysis
- Finite element model for slabs and walls
- Linear dynamic analysis with response spectrum

Description on this project

The Unicredit headquarter is a complex of three towers, comprising the largest components of Porta Nuova Garibaldi, a seven-hectare, mixed-use development north of Milan's city center. Also, they redevelop the abandoned railyards adjacent to Stazione Garibaldi, forming a new gateway to the city. Spiraling upward, the asymmetrical main tower culminates in a sculptural, stainless steel spire. Like the two smaller towers, the building is clad in reflective glass. Their narrow, curved forms enclose Piazza Gae Aulenti, a new public space. Facing the piazza, the facades incorporate sunshades, emphasizing the buildings' fluid shape.

MSC Associati

Address	via cialdini 37 ang. via montanari 20161 Milano, Italy		
Introduction	MSC Associati was established in 1961 and is configured as a design and consulting company which is active in the fields of architecture, urban planning and civil engineering. The company employs staffs of about 30 technicians who can operate in a wide range of activities. MSC Associati can provide modular services according to the client's needs, from specialized consulting to the engineering.

Moscow City Palace Tower

Moscow, Russia

Owner	City-Palace LLC / ZAO Snegiri Development / Transneft
General Contractor	Renaissance Construction Company
Architect	GCorproject / RMJM
Engineering Consultant	GK-Techstroy
Construction Period	2008 - 2015
Type of Project	Office Building
Size of Structure	245m Height (58-story)

Main features used in this application

- Construction stage analysis with creep and shrinkage
- Linear dynamic analysis with response spectrum

Description on this project

The tower has become Moscow City's new architectural landmark. Inspired by the images of St. Basil's Cathedral and Tatlin's tower, the evolutionary spiral building structure represents the idea of progress and future. The project got short-listed in MIPIM 2016, where the world's best real estate projects are selected. The building combines state-of-the-art engineering technologies and features of Russian architectural style. Each of the 54 floors is constantly twisted by 3° whilst being arranged around the central core of the building lets the skyscraper experience an elegant rotation in a clockwise direction from the base to the top by more than 150°.

GK-Techstroy

Address	ul. Petrovka, d. 15/13, building 5, 107031 Moscow, Russia		
Introduction	The company was founded in 2000. They engage in a full range of design projects of constructive part of production, residential and public buildings, including the unique objects.

Ping An International Finance Center Tower

Shenzhen, China

Owner	Ping An Life Insurance Company of China
General Contractor	China Construction First Group Construction & Development
Architect	Kohn Pedersen Fox Associates
Engineering Consultant	CCDI / Thornton Tomasetti
Construction Period	2010 - 2017
Type of Project	Office Building
Size of Structure	599m Height (115-story)

Main features used in this application

- Construction stage analysis with creep and shrinkage
- Linear dynamic analysis with response spectrum

Description on this project

Ping An International Finance Center Tower will become the second tallest building in China, at 599m. This building is a 115 story office tower consisting of offices, support facilities, a conference center, retail and parking. The selected structural system consists of a composite concrete core with steel outriggers connecting to eight super-columns. The exterior frame is composed of seven double layer belt trusses located at the mechanical and refugee floors. The exterior belt trusses are interconnected with a super diagonal at each exterior face of the building. The project also includes a steel-framed 11-story podium with high-end shopping arcades, restaurants and roof-top cafes.

CCDI

Address CCDI GROUP Building, No.1758, Siping Road, Shanghai, 200433, China

Introduction Founded in 1994, CCDI is a large global architecture and engineering consulting firm that provides integrated professional services for urban construction and development. Its business units cover broad industry sectors with diverse specialized expertise. CCDI operates cross-regionally with main offices in Shanghai, Beijing, Shenzhen, Chengdu, Sydney, New York, Qingdao and Suzhou.

Bewtech Office Building

Bangkok, Thailand

Owner Bewtech
Engineering Consultant Umbau
Construction Period Completed in 2014
Type of Project Office Building
Size of Structure 3-story

Main features used in this application

- Concrete design as per ACI318
- Linear static analysis with finite elements

Description on this project

This building is composed of 3 stories. Regarding of structure, meshed plate elements were used with auto-mesh generation feature in order to simulate irregular shape of slab. Also, void entrance with piloti and glass façade provides open and bright space from a design point. With the excellence of the design of the building from its irregular shape, this building is also actively showed in local broadcast shootings.

Umbau

Address 3/49 Prachaniwet Building 1, floor, Nimitmai Nua, Chatuchak, Bangkok 10900, Thailand

Introduction Umbau is an architectural design services provider for structural engineering design, electrical system, air conditioning and construction management. Design services of all types of construction such as residential buildings, special-purpose plant buildings and advertising signposts for building structure design.

Shibata City Hall

midas Gen

Shibata, Japan

General Contractor	Taisei Shibata Ito Joint Venture
Architect	aat+makoto yokomizo architects, Inc.
Engineering Consultant	Arup
Construction Period	2014 - 2016
Type of Project	Office Building
Size of Structure	34m Height (8-story)

Main features used in this application

- Steel structure (upper structure) + reinforced concrete
- Construction partially striking post tension (lower structure) + base isolation structure (3rd wall head)
- Basic structure: piled raft (deep soil improvement + prepared concrete pile)

Description on this project

The new city hall project of Shibata, Niigata has 400 years of history as a castle town. This project is expected to become activation of a central city area, and a starting point on which a tourist takes a walk. The building consists of three layers. The high part is a work room which appears like white clouds. The medium-rise part is a parliamentary function. The low layer part has a citizen service function. There is a half-outdoor open space called "FUDANOTSUJI" in the first floor.

Arup

Address 3F, Tobu Fuji Building, 24-4 Sakuragaoka-cho, Shibuya-Ku, Tokyo 150-0031, Japan

Introduction Arup is a multinational professional services firm headquartered in London which provides engineering, design, planning, project management and consulting services for all aspects of the built environment. The firm has over 14,000 staffs based in 92 offices across 42 countries, and has participated in projects in over 160 countries.

Xiamen International Center

midas Gen

Xiamen, China

Owner	Winland Group
General Contractor	China Construction Six Engineering Division (CSCEC 6 th Bureau)
Architect	Gensler
Engineering Consultant	ISA Architecture
Construction Period	Under Construction
Type of Project	Office Building
Size of Structure	344m Height (72-story)

Main features used in this application

- Construction stage analysis
- Linear static analysis with finite elements

Description on this project

The building is located on the western side of Xiamen Island in the Siming District. For the majority of its height, the building is curved outward on its northwest and southeast elevations. As it reaches its pinnacle, an aperture disrupts the outwardly curved façade, which then curves inward along the building's final stories. This interplay between convex and concave forms imparts a sense of dynamism and tension. The gap in the building runs through the northwest and southeast elevations, where a traversable ledge extends beyond the exterior wall for unparalleled views of the strait and mainland China.

ISA Architecture

Address No.258 Shimen Road(No.2), 200041, Shanghai, China

Introduction ISA Architecture was founded in 1953. It is a leading international architectural, construction design, urban planning and engineering institute. ISA is also committed to green building and sustainable urban development. They handle with international and local long-term integration of architectural harmony with the environment.

Park Place Office Tower

midas Gen

Yueyang, China

Owner	Shanghai Cross Ocean Property & Development
General Contractor	Shanghai Cross Ocean Property & Development
Engineering Consultant	CCTEG Chongqing Engineering
Construction Period	Completed in 2008
Type of Project	Office Building
Size of Structure	198m Height (43-story)

Main features used in this application

- Construction stage
- Implanted truss
- Nonlinear analysis

Description on this project

Park Place Office Tower covers an area of about 21,000m², from a 43-story Grade A office building, 5-story international brand and high-end leisure, the theme of shopping and shopping malls and 24-story super five-star boutique hotel composition, is expected to be completed in 2010 as a whole, 1 Division to provide 60 sets of Hitachi Electric (Fu) ladder. After the completion of the Shanghai area is another landmark and premier high-grade office buildings.

CCTEG Chongqing Engineering

Address	District Daping (Majiabao) two Yangtze River Road 179, Chongqing city, Yuzhong 400016, China		
Introduction	CCTEG Chongqing Engineering Co., Ltd. was established in 1953. Coal Design Institute in the industry has been formed in the engineering survey, design, supervision and construction general contracting as the main body, leading to the construction, municipal, industrial and environmental protection in the industry pattern, the remarkable results were achieved in all fields.

NCC Office Building

midas Gen

Stockholm, Sweden

Owner	NCC
General Contractor	NCC
Architect	White
Engineering Consultant	NCC
Construction Period	Under Construction
Type of Project	Office Building
Size of Structure	38,000m ²

Main features used in this application

- Linear static and nonlinear dynamic analyses
- Construction stage analyses
- Dimensioning steel and concrete structures

Description on this project

The NCC Buildings are three connected office buildings with commercial premises at the ground floor as well as public premises and services for the users of the offices.

NCC

Address	Vallgatan 3, 170 80 Solna, Sweden		
Introduction	NCC is one of the leading construction and property development companies in the Nordic Region. With the Nordic region as its home market, NCC is active throughout the value chain - developing and building residential and commercial properties, and constructing industrial facilities and public buildings, roads, civil engineering structures and other types of infrastructure.

POSCO E&C Tower

midas Gen

Incheon, Korea

Owner	POSCO E&C
General Contractor	POSCO E&C
Engineering Consultant	MIDAS IT
Construction Period	2007 - 2010
Type of Project	Office Building
Size of Structure	185m Height (39-story)

Main features used in this application

- Construction stage analysis
- Linear dynamic analysis with response spectrum
- Steel frame design as per KSSC-LSD

Description on this project

POSCO E&C Tower is a twin-tower building with a floor space of 148,790m², each with five basement floors and 39 aboveground floors. The class A office space can accommodate 3,200 workers and features 1,124 parking spaces.

MIDAS IT

Address	MIDAS IT Tower, 17, Pangyo-ro 228 beon-gil, Bundang-gu, Seongnam-si, Gyeonggi-do, 13487, Korea

Nagoya-C-Office Building

midas Gen

Nagoya, Japan

Engineering Consultant	Shuji Tada Structural Consultant
Construction Period	Completed in 2003
Type of Project	Office Building
Size of Structure	2-story

Main features used in this application

- Finite elements for meshed slabs and roofs
- Linear dynamic analysis with response spectrum

Description on this project

A relatively large roof at the upper part of the office which is integrated with the exhibition space is formed in a one-way hanging shape. A laminated material of 120mm × 150mm, which is discretized, is laid on one side and arranged in a direction orthogonal to the wood fiber. It is characterized by introducing prestress.

Shuji Tada Structural Consultant

Address	4-7-4, Wakabayashi, Setagaya, Tokyo, 154-0023, Japan		
Introduction	Shuji Tada Structural Consultant is specialized in structural engineering design. Also, they provide structural system which is focused on material features such as steel, wood, RC and so on.

The President Bangwa Building

midas Gen

Bangkok, Thailand

Owner	Pattana Land Development
Engineering Consultant	Umbau
Construction Period	2013 - 2017
Type of Project	Residential Building
Size of Structure	113m Height (35-story)

Main features used in this application

- Linear static analysis with finite elements for mat foundation
- Response spectrum analysis
- Static wind load as per ASCE7

Description on this project

The President Bangwa is a condominium project, developed by Pattana Land Development, located at Bangkok. Construction of The President Bangwa was completed in 2017. The condominium comprises of 3 buildings, having 30 floors and 35 floors respectively.

Umbau

Address	3/49 Prachaniwet Building 1, 5 th floor, Nimitmai Nua, Chatuchak, Bangkok 10900, Thailand		
Introduction	Umbau is an architectural design services provider for structural engineering design, electrical system, air conditioning and construction management. Design services of all types of construction such as residential buildings, special-purpose plant buildings and advertising signposts for building structure design.

Centric Sathorn - Saint. Louis

midas Gen

Bangkok, Thailand

Owner	SC ASSET Public
Engineering Consultant	Umbau
Construction Period	2012 - 2014
Type of Project	Residential Building
Size of Structure	28-story

Main features used in this application

- Steel frame design as per AISC
- Linear static and P-delta analysis
- Eigenvalue and response spectrum analysis

Description on this project

Saint Louis is a condominium project, developed by SC Asset, located at Soi Saint Louise 3, Yannawa, Sathorn, Bangkok 10500. Construction of Centric Sathorn-Saint. Louis was completed in 2013. The condominium comprises of 2 buildings, having 28 floors and includes 344 units.

Umbau

Address 3/49 Prachaniwet Building 1, 5th floor, Nimitmai Nua, Chatuchak, Bangkok 10900, Thailand

Introduction Umbau is an architectural design services provider for structural engineering design, electrical system, air conditioning and construction management. Design services of all types of construction such as residential buildings, special-purpose plant buildings and advertising signposts for building structure design.

Taoyuan International Airport MRT Station

Taoyuan, Taiwan

Owner	Bureau of High Speed Rail / MOTC
General Contractor	Bureau of High Speed Rail / MOTC
Engineering Consultant	CECI Consulting Engineering
Construction Period	Completed in 2014
Type of Project	Metro Station

Main features used in this application

- Linear static and dynamic response analysis
- Surface spring supports for mat foundation

Description on this project

The project is a five-story parking facility in Taoyuan MRT airport line. It also provides Taizhou MRT airport train maintenance service. It is located in Taoyuan City Park North Road, Taiwan high-iron Taoyuan station. The main purpose of the building is to provide the airport train scheduling and maintenance services, etc., with a total area of about 19 hectares. The factory contains A17 terminal and Taoyuan MRT headquarters including five maintenance factories, electric car cleaning facility, sewage treatment facility and Taoyuan Jiejie control center.

CECI Consulting Engineering

Terminal 3 at Beijing Capital International Airport

Beijing, China

Owner	Beijing Capital International Airport Company
General Contractor	Beijing Urban Construction Group (BUCG)
Architect	Foster and Partners
Engineering Consultant	Arup
Construction Period	2004 - 2008
Type of Project	Airport Terminal
Size of Structure	930,000m ²

Main features used in this application

- Linear static analysis with finite elements
- Node local axis for reaction in local direction
- Beam end release for pinned connection

Description on this project

Completed as the gateway to the city for the twenty-ninth Olympiad in 2008, Beijing's international terminal is the world's largest and most advanced airport building not only technologically but also in terms of passenger experience, operational efficiency and sustainability. Designed to be welcoming and uplifting, it is also a symbol of place and its soaring aerodynamic roof and dragon-like form celebrating the thrill and poetry of flight and evoking traditional Chinese colors and symbols.

Arup

Address Room 3008, 30/F, Jing Guang Centre, Hu Jia Lou, Chaoyang District, Beijing 100020, China

Incheon International Airport Transportation Center

midas Gen

Incheon, Korea

Owner	Government of Korea
General Contractor	Hyundai / Samsung and Daewoo E&C
Architect	Terry Farrell & Partners / DMJM / SAMOO Architects & Engineers
Engineering Consultant	YOOSHIN Architects & Engineers
Construction Period	Completed in 2002
Type of Project	Airport Terminal
Size of Structure	6-story

Main features used in this application

- Linear static analysis with finite elements
- Steel frame design as per KSSC-LSD

Description on this project

Incheon International Airport Transportation Center is an icon of dynamism, embracing culture and flight and invoking the future. The structural form and composition symbolize flight and dynamism. The steel truss structure rises from the ground and vaults over the hall. The long graceful curves of the skeletal roof express the fluid form of a plane in take-off. Resting on top is the futuristic pod-like flight control center. With its glass belly, it acts as an aero foil for the natural ventilation of the interior hall.

YOOSHIN Architects & Engineers

Address Seungjin B/D, 48 Pyeongchondaero 227 beongil, Dongangu, Anyangsi, Gyeonggi-do 14072, Korea

Introduction YOOSHIN AE is an architectural practice established in 1978. They have plodded away for over 35 years in the field of architectural design and construction management / supervision, and produced notable projects such as Daejeon World Cup Stadium, Jincheon National Athlete Training Centre, Gwangyang Harbor Facilities, Incheon Children's Science Museum and etc for private, commercial and public sector clients.

Yulin Yuyang Airport Phase II expansion project terminal

midas Gen

Yuyang, China

Owner	Western Airport Group
General Contractor	Northwest Airport Group Construction Company
Engineering Consultant	JINGGONG Group
Construction Period	2015 - 2017
Type of Project	Airport Terminal
Size of Structure	28m Height

Main features used in this application

- Construction stage analysis with prestressed tendon
- Linear dynamic analysis with response spectrum

Description on this project

The project has 42,500m² area, located in Yulin City. The main body is a concrete frame structure and the roof is large span steel structure. Roof is a string arch structure made with two box-shaped steel beams, high-strength steel wire string, pole for the triangle and round steel pipe.

JINGGONG Group

Address Jinggong Plaza, No.112 Jinkeqiao Road, Keqiao, Shaoxing City, Zhejiang Province, China

Introduction The company was found in 1968. It is located in Shaoxing now and has built up its predominant industries and grown into a large-sized hi-tech global-market-oriented enterprise. They focus on its dominant industries of steel structure building and equipment manufacture.

Tianjin Cultural Center Library

midas Gen

Tianjin, China

General Contractor	Tianjin City Real Estate Development Group
Architect	Riken Yamamoto & Field Shop
Engineering Consultant	Structural Design Office Plus One Co., Ltd.
Construction Period	Completed in 2011
Type of Project	Library
Size of Structure	30m Height (5-story)

Main features used in this application

- Steel frame design as per Chinese standard
- Truss elements

Description on this project

In order to realize the concept of "stacking while shifting", the wall girder is assembled in a parallel cross shape of 20.4m in length and width. It is a frame in which it is shifted by half span. In addition, earthquake resistant cores are connected to each other with a wall girder and the entire frame is used as a super ramen frame.

Structural Design Office Plus One Co., Ltd.

Address	Yoshino Building 3F, 8-13 Yanban-cho, Chiyoda-ku, Tokyo 102-0081, Japan		
Introduction	The firm was established in 1988. Through the structural design, they work hard to achieve their purpose while working with clients, architects, facility designers and constructors as much as possible.

Architect	Osamu Watanabe Architects
Engineering Consultant	Rhythm Design Mov Co., Ltd.
Construction Period	Completed in 2014
Type of Project	Educational Building
Size of Structure	2-story

Main features used in this application

- Steel building design as per Japanese standard
- Linear dynamic analysis with response spectrum

Description on this project

It is a 2-story building on the ground, but it is a three-layer structure with a large colonnade space with a roof hut to secure daylighting and ceiling height. The roof structure is a vault-like diagonal lattice beam with a span of 13.5m and it is a space blown by about 30m out of the total length of about 50m.

Rhythm Design Mov Co., Ltd.

Address	1-2-21, Kamimaezu, Naka-ku Nagoya-shi, Aichi, 460-0013, Japan		
Introduction	Rhythm Design Mov Co., Ltd. is a structural design office. They provide an appropriate engineering service for architecture and environment. Also, they have established two offices in Tokyo and Nagoya to get the real information.

Noyori Conference Hall

midas Gen

Nagoya, Japan

Architect Iida Archship Studio
Engineering Consultant Structural Design Office Plus One Co., Ltd
Construction Period Completed in 2004
Type of Project Educational Building
Size of Structure 18.7m Height (5-story)

Main features used in this application

- Steel building design as per Japanese standard
- Linear dynamic analysis with response spectrum

Description on this project

It is surrounded by glass. There are halls on the 1st and 2nd floors, the 3rd and 4th floor are a complex steel frame framed with the residence building. By adopting two PC steel rods with tension applied to the mullion of a glass curtain wall with a height of approximately 10m and a truss made of square steel slanted material, it's possible to make a glass screen with high transparency.

Marine Academy

midas Gen

Panvel, India

Owner B. P. Marine Institute
General Contractor Accurate Enterprises
Architect Dimensions
Engineering Consultant Structural Concept
Construction Period 2006 - 2008
Type of Project Educational Building
Size of Structure

- Hostel Building (12-story)
- Academic Building (5-story)
- Recreation Building (4-story)

Main features used in this application

- RC building design as per IS 456 & 1893

Description on this project

The structure is designed resembling the units of a ship as it is a marine institute. The columns are designed as sloping members, as the floor plate increases, which gives clear floor plates on all the floors.

Structural Concept

Address 803, Maithali's Signet, Sector 30A, Vashi, Navi Mumbai, Maharashtra, 400705, India
Introduction Structural Concept Designs was established in 2001 at Navi Mumbai. The firm provides a full range of structural engineering services from concept to construction. Also, the firm helps in creating high performance and durable concrete aids in and economical structures.

Brillia Running Stadium

midas Gen

Tokyo, Japan

Owner	Taiyo-Kogyo Corporation / Tokyo Tatemono Co., Ltd.
Architect	E.P.A
Engineering Consultant	KAP
Construction Period	Completed in 2016
Type of Project	Sports Dome
Size of Structure	8.5m Height

Main features used in this application

- Linear static analysis with beam elements
- Buckling analysis

Description on this project

It is a sports facility athletes for Paralympics. Under the large-scale roof composed of wood and ETFE, there are 60m athletic track, research facility, conference room and shower room. In order to reinforce the arch frame in both horizontal and vertical direction, laminated wood members are arranged at the bottom.

KAP

Address	Chiyoda Fujimi Sky Mansion 1F, 2-4-9 Fujimi, Chiyoda-ku, Tokyo 102-0071, Japan
Introduction	KAP is a structural design group for various materials, scales and purposes. They can handle many structure type such as wood, RC, steel, PCa/pc and seismic. Also, they support diverse scales projects from a house to a large-scale government office and civil engineering structures.

Car Parking Lot

midas Gen

Karlstad, Sweden

Owner	Löfbergs Fastigheter
Architect	PROJEKTENGAGEMANG
Engineering Consultant	PROJEKTENGAGEMANG
Construction Period	Under Construction
Type of Project	Car-park Building
Size of Structure	6-story

Main features used in this application

- Finite element model for meshed slab members
- RC building design as per Eurocode2

Description on this project

The design of the parking lot creates opportunities for alternative uses of the building in the future. The construction is based on a concrete prefabricated concrete frame and is dimensioned so that the possibility of building an additional roof-covered floor can be found. Parts of the roof can be used as green space, while the rest of the roof is still available for cars and car parking.

PROJEKTENGAGEMANG

Address	Arstaangsvagen 11, 100 74 Stockholm, 47146, Sweden
Introduction	Projektengagemang was founded in 2006. Per Goranson joins the company, and the building of the group starts. The firm now has over 600 employees in over 30 locations. They create extra value through the provision of qualified consultancy services and solutions within architecture, construction, infrastructure, industry and project management.

St. Peter's Square

Vatican, Italy

Owner	Vatican City State
General Contractor	Italiana Costruzioni spa - F.lli Navarra
Engineering Consultant	Studio Croci & Associati
Construction Period	1655 - 1667
Restoration Period	2009 - 2014
Type of Project	Monuments

Main features used in this application

- Plastic analysis with finite elements

Description on this project

In the spring of 2009, the largest restoration ever undertaken of the colonnades is built in the 17th century by Bernini, occupied more than 100 conservators, scientists and engineers using the most modern techniques. They are thus able to bring to their former glory 88 pillars, 284 columns and 140 statues of saints surrounding the square, which forms part of the border between the Vatican and the Italian states. The Studio Croci & Associati in Rome is commissions to design an intervention that provides for the complete demolition of the floor in question and the subsequent reconstruction of the same by means of prefabricated slabs prestressed concrete.

Studio Croci & Associati

Address	Viale Marco polo, 37 00154 Rome, Italy		
Introduction	The company was founded in 1985 by the activity of Prof. Giorgio Croci, and specializes itself in design and tests for civil engineering and for the architecture, with particular attention to structural and architectural design, to the diagnostics, to the consolidation and restoration of monumental structures, to the seismic protection, to the survey.

Process to Knowledge base Modeling FEM

L'Aquila, Italy

Owner Ministry of Cultural Heritage and Tourism
General Contractor Regional Directorate for Cultural and Landscape Heritage for Abruzzo IT
Engineering Consultant Expin
Construction Period Conducted in 1954
Size of Structure 3.5m Height

Main features used in this application

- 3D 5million elements solid model
- Dynamic behavior of the mammoth in the Spanish fortress

Description on this project

The study of the metallic supporting frame of the mammoth is particularly for its structural stability. It's located in a seismic prone area and has survived from the very strong L'Aquila earthquake in 2009.

Expin

Address Via Panà, 56/ter, 35027 Noventa Padovana, PD, Italy

Introduction Expin is a company born in 2010 as a spin-off of the University of Padova. The company works in the field of development, application and management of structural diagnostics systems, structural health monitoring and implementation of advanced structural models for civil engineering (relevant and strategic buildings, infrastructures, housing and industries) and restoration (cultural and architectural heritage).

San Lorenzo

Arezzo, Italy

Engineering Consultant Microm Ingegneria
Construction Period Evaluation of Existing Building
Type of Project Religion Building
Size of Structure 13m Height (3-story)

Main features used in this application

- Plastic analysis with masonry material properties
- Finite element model for seismic safety verification of masonry building

Description on this project

The building, for its historical and constructional characteristic, is monumental and cultural interest type. Overall, it has a 1,600m² plant area, spreads over three levels above ground and has a total of about 13m height. The total volume is approximately 20,000m³. The purpose of the investigation was to:

- Determine the natural frequency of vibration of the construction site.
- Determine the natural frequency of vibration of the building in its main direction.
- Check the phenomenon of double resonance of the brick-resistance structure.
- Compare the results between obtained from vibration frequency and those from the FEM model and give an assessment of the mechanical model validation.

Microm Ingegneria

Address Via E. Francini, 3, 52037 Sansepolcro, Italy

Introduction Microm Ingegneria uses BIM software for architectural and structural design of constructive organisms. The firm specializes in BIM or Building Information Modeling which is an innovative technology that represents a new way of working where, through the use of common standards and product-oriented representations, a 3D visualization of the building is presented.

Villa Reale

Monza, Italy

Owner	Comune di Monza and the Lombardy Region
General Contractor	Restauro Nuova Villa Reale Monza
Engineering Consultant	Studio Croci & Associati
Construction Period	Completed in 1780
Restoration Period	2012 - 2014
Type of Project	Monuments / Historical Building

Main features used in this application

- Plastic analysis with total strain crack model

Description on this project

Empress Maria Theresa of Austria commissioned the construction of the estate between 1777 and 1780. Design and execution of necessary structural works have granted a significant seismic improvement of the whole building, thanks to the special strengthening of the walls implemented and to the consolidation/stiffening of slabs. All original surfaces have been respected, all wooden slabs have been maintained. Almost one hundred workers and restorers have been involved in the restoration of the central body of more than 10,000m², with over 40 rooms, 2,000m² of parquet, 3,000m² of roofs and 800m² of stone surfaces.

Studio Croci & Associati

Address	Viale Marco polo, 37 00154 Rome, Italy		
Introduction	The company was founded in 1985 by the activity of Prof. Giorgio Croci, and specializes itself in design and tests for civil engineering and for the architecture, with particular attention to structural and architectural design, to the diagnostics, to the consolidation and restoration of monumental structures, to the seismic protection, to the survey.

Saint Irene Basilica

Istanbul, Turkey

Owner Turkish Ministry for Cultural Heritage and Activities
Engineering Consultant Studio Croci & Associati
Construction Period 4th - 8th Century
Type of Project Monuments / Religion Building

Main features used in this application

- Masonry analysis
- Cracked analysis with total strain crack model

Description on this project

Located in the outer courtyard of Topkapi Palace, Hagia Irene has the typical form of a Roman basilica, consisting of a nave and two aisles, which are divided by three pairs of piers. This helps to support the galleries above the narthex. Semicircular arches are also attached to the capitals which also helps to provide support to the galleries above. The basilica is approximately 100m long and the dome itself is 15m wide and 35m high and has twenty windows. Design and seismic retrofitting, reliefs, non-destructive investigations, shaking table tests of a physical model in a scale of 1:10.

Studio Croci & Associati

Address Viale Marco polo, 37 00154 Rome, Italy

Oita Prefectural Art Museum

midas Gen

Oita, Japan

Owner	Oita Prefecture
General Contractor	Kajima Corporation / Umabayashi Corporation
Architect	Shigeru Ban Architects
Engineering Consultant	Arup
Construction Period	2013 - 2015
Type of Project	Museum Building
Size of Structure	25m Height (4-story)

Main features used in this application

- Steel & RC building design as per Japanese standard
- Linear time-history dynamic analysis

Description on this project

This museum is an open and flexible space, and at the same time, it incorporates a design based on the bamboo work traditionally inherited in Oita. On the first floor, there is a vast pillar space which opens to the front and an exhibition space surrounded by timber grid walls is arranged on the third floor. In order to realize the large space on the first floor, a large span steel truss and hanging floors are placed. In the design of timber grid walls, earthquake-resistant brace is adopted by laminated wood as fire resistant covering of steel columns, and planned to make the most of wooden materials.

Arup

Address	3F, Tobu Fuji Building, 24-4 Sakuragaoka-cho, Shibuya-Ku, Tokyo 150-0031, Japan		
Introduction	Arup is a multinational professional services firm headquartered in London which provides engineering, design, planning, project management and consulting services for all aspects of the built environment. The firm has over 14,000 staffs based in 92 offices across 42 countries, and has participated in projects in over 160 countries.

Beijing Olympic Stadium

Beijing, China

Owner	National Stadium Co., Ltd.
General Contractor	CITIC International Contracting
Architect	Herzog & de Meuron Architekten AG
Engineering Consultant	Arup
Construction Period	2003 - 2008
Type of Project	Stadium
Size of Structure	69m Height (7-story)

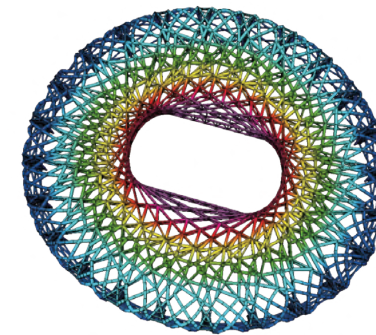

Main features used in this application

- Linear static analysis with truss elements
- Linear dynamic analysis with response spectrum

Description on this project

Beijing Olympic Stadium is the 2008 Olympic Games' most striking structure, recognized all over the world. The building's dynamic form and vast scale create a new icon for China and the city of Beijing. The circular shape of the stadium represents 'heaven', while the adjacent square form of the National Aquatics Center (Water Cube), also design-engineered by Arup, is a reflection of the Chinese symbol for Earth. The structural form of the stadium is popularly described as a 'bird's nest', with its pattern inspired by Chinese-style 'crazed pottery'. Seemingly random, the pattern abides by complex rules for which advanced geometry was defined. To ensure a compact and optimum design, the seating bowl was established first, with the outer façade wrapping around it. The design ensures that all spectators are as close as possible to the action and have clear sight lines. As Beijing is located in one of the world's most active seismic zones, Arup uses advanced seismic analysis to test the stadium under various earthquake conditions and ensure that the structure can withstand major shocks.

Arup

Address Room 1301, Tower A Center Plaza 161 Linhexi Road Tianhe District, Guangzhou 510620, China

Introduction Arup is a multinational professional services firm headquartered in London which provides engineering, design, planning, project management and consulting services for all aspects of the built environment. The firm has over 14,000 staffs based in 92 offices across 42 countries, and has participated in projects in over 160 countries.

Mari time Museum

Lingang, China

Owner Shanghai Harbour City Investment
General Contractor The Shanghai Lingang New City Development
Architect GMP Hamburg German / Gerkan Marg & Partner
Engineering Consultant Werner Sobek
Construction Period 2005 - 2009
Type of Project Museum Building
Size of Structure 46,400m²

Main features used in this application

- Linear static analysis with steel truss elements
- Steel frame design

Description on this project

The main component of the new Maritime Museum in Lingang is composed of a large-hall encompassing a volume of some 63,000m³ and is formed by two dual-curved shell-shaped surfaces and two cable-net facades spanned between them. Designed as a two-layer steel-grid shell the framework is supported at a total of four pivoted points. The two entwined shells face in opposite directions and touch at just a single point at a height of 40m. The overall height to the extended 'wing tips' is approximately 58m. Each of the respective opaque roof areas with aluminum panel cladding incorporates a highly transparent, dual-curved, pre-stressed cable-net facade with a width of up to 24m and a surface area of 1,000m².

Werner Sobek

Address Albstraße 14, 70597 Stuttgart, Germany
Introduction Werner Sobek stands throughout the world for engineering, design, and sustainability. The work of them is defined by premium design on the basis of high-class engineering combined with sophisticated green technologies. They work on all types of buildings and materials. Special emphasis lies on lightweight structural design, transparent facade systems, and sustainable building concepts.

West International Expo Center

Chengdu, China

General Contractor	China Construction Second Engineering Bureau Limited
Engineering Consultant	China Construction Bureau Installation Engineering
Construction Period	2014 - 2017
Type of Project	Exhibition Building
Size of Structure	530,000m ²

Main features used in this application

- Construction stage analysis
- Linear static analysis with finite elements

Description on this project

There are 6 exhibition halls, including 5 exhibition halls (A, B, C, E and F) and a multi-purpose hall (Hall D), as well as entrance hall and traffic corridor outside the exhibition hall (traffic hall). The main structure of the project is the distribution of the theme structure of the venues, the roof structure and traffic hall of the venues. The tender scope is A, B, C, D Hall and the traffic hall. The total steel quantity is about 50,000 tons. The main structure is grid, spindle truss, plane truss and steel column steel beam. The main connection form is high strength bolt node, bolt ball node and sliding bearing.

China Construction Bureau Installation Engineering

Address	Beijing Fengtai District Auto Museum East Road on the 6 th floor, Block E, 7-8 layer, China		
Introduction	The company was founded in 1952. After the restructuring in December 2007, the name was changed "built two innings to install engineering". The company provides services in general contracts and construction of mechanical, electrical and structure engineering including municipal public works.

Construction Period	2005 - 2011
Type of Project	Museum Building
Size of Structure	40m Height

midas **Gen**

Main features used in this application

- Linear static analysis with finite elements
- Irregular geometry generation & auto-mesh with midas FX+

Description on this project

The museum's construction was started in 2008 and completed in 2011. The building is wrapped in polished metal louvers to reflect and dissolve the planned surroundings while filtering solar gain and introducing natural ventilation. The interior is divided into several exhibition halls opening onto a shared public space that runs through the building. The extensive roof glazing introduces cascading into this environment, which is then channeled through the building by the luminescent walls.

China Institute of Building Standard Design & Research

Address	No. 2, Interwest Building, 9 Shou Ti South Road Haidian District Beijing, 11, 100048, China
Introduction	The firm was founded in 1956. It was formerly known as the Ministry of Construction directly under the institutions - Building Standards Design Institute but was transformed into a central science and technology enterprises. Now, it's under the China Construction Technology Group.

General Contractor	Architecture Design & Research Institute of south China University of Technology
Architect	Beijing construction industry group Co., Ltd.
Engineering Consultant	Architectural Design & Research Institute of south China University of Technology
Construction Period	2005 -2007
Type of Project	Gymnasium
Size of Structure	34,838m ²

Main features used in this application

- Optimization design of steel structure
- Construction stage analysis

Description on this project

It is an indoor arena located on the campus of the Beijing University of Technology in the Chaoyang District in Beijing, China. The gymnasium hosted the 2008 Summer Olympics badminton and rhythmic gymnastics events. A seating capacity of the gymnasium is 7,500 and has a floor space of 24,000m². After the Olympic Games, it has served as a training facility for Chinese badminton teams and also as a sports and recreational activities center for students and local communities. The gymnasium was completed in September, 2007.

Architectural Design & Research Institute of south China University of Technology

Address Wanshan Road 381, Guangzhou City, Tianhe District, China

Introduction The School of Architecture, with more than 80 years of history, is one of the earliest schools established at South China University of Technology (SCUT). SCUT used to be named Xiang Qin University, founded in 1932, with the Technology Institute of National Sun Yet-sen University merged into the school in 1938.

Foshan Lingnan Pearl Gymnasium

midas Gen

Guangdong, China

General Contractor	Guangzhou 3rd Construction & Engineering
Architect	Environment Design Institute / Architectural Design & Research Institute of Guangdong
Engineering Consultant	Guangzhou City Planning Kance Design & Research Institute
Construction Period	Completed in 2006
Type of Project	Sport Stadium
Size of Structure	36m Height (4-story)

Main features used in this application

- Linear static analysis with finite elements
- Auto-mesh generation

Description on this project

The project is designed to complete the pursuit of rational mechanics, and change the rotation of the dome. The arched body methods used for this project is to correct for the level of ring assembly body by complying with the new computer technology. In addition, it is configured to support the level of central and lateral pillars of the oblique stroke. The dome satisfies the stability under seismic, wind pressure and partial loads.

Guangzhou City Planning Kance Design & Research Institute

Address	3 Jianshe 2 nd Rd, HuanShi DongLu YanXian, Yuexiu Qu, Guangzhou Shi, Guangdong Sheng 510000, China		
Introduction	GZPI founded in 1953, is the largest and most professional, comprehensive company of the country's leading planning and design of high-tech units. They have committed the government, society and the public to provide the whole process of construction technology services.

Yantai University Gymnasium

midas Gen

Yantai, China

General Contractor	Zhejiang Southeast space Frame
Engineering Consultant	China Metallurgical Engineering Technology
Construction Period	Completed in 2006
Type of Project	Gymnasium
Size of Structure	51,980m ² / 8,728 Seats

Main features used in this application

- Reinforced concrete frame and steel arch members
- Linear dynamic analysis with response spectrum

Description on this project

The project is a multi-functional gymnasium project and massive concrete structure with super arch foot platform. To obtain satisfactory results, it carried out that the preparation of the application of computer software, an in-depth detailed analysis for the technical characteristics and in accordance with the specific conditions of the construction site formulate practical concrete implementation plan. Also, a large arch foot platform was performed in order to handle technology difficulties of mass concrete construction.

China Metallurgical Engineering Technology

Address	No.33, Xidu Cheng Road, Daidain District, Beijing 100088, China
Introduction	The firm was established in 1955. It is engaged in construction technology research, promotion and application of large-scale technology enterprises, under the China Metallurgical Industry Group Co.
Email	iysiy@263.net

Mianyang Jiuzhou Stadium

midas Gen

Sichuan, China

Owner	Mianyang City Sports Bureau
Architect	Beijing Institute of Architectural Design
Engineering Consultant	Beijing Institute of Architectural Design
Construction Period	2003 - 2004
Type of Project	Sport Stadium
Size of Structure	161,877m ²

Main features used in this application

- Linear static analysis
- Linear dynamic analysis with response spectrum
- Buckling analysis

Description on this project

Jiuzhou Stadium is a first-class and modern landmark. It applied steel structure construction technology, with a strong ductility, attenuation of seismic waves, which effectively absorb seismic capacity, which ensuring construction almost not affected by the earthquake. In 2008, it became the temporary housing for survivors in the aftermath of the Sichuan earthquake.

Beijing Institute of Architectural Design

Address	No 62.Nan Li Shi Lu Xicheng District, Beijing 100045, China		
Introduction	BIAD is a large-scale state-owned architectural design and consulting institute established in 1949. It has 13 domestic branches and 14 wholly-owned or holding companies, 9 joint-stock companies nationwide.		
Website	www.biad.com.cn	Email	marketing@biad.com.cn

Grand National Theater

midas Gen

Beijing, China

General Contractor	Hong Kong Construction
Architect	Paul Andreu, Architecte Paris
Engineering Consultant	Setec TPI
Construction Period	1999 - 2008
Type of Project	Opera House
Size of Structure	46m Height

Main features used in this application

- Linear static analysis with finite elements
- Linear dynamic analysis with response spectrum

Description on this project

The project is located in the heart of Beijing. It is a building with a total area of 149,500m² which curved volume emerges like an island in the middle of a lake. The hull covered with titanium is a super-ellipsoid of 213m of long axis, 144m of small axis and 46m of Height. A curved canopy 100m wide at the base cuts the hull in half.

Setec TPI

Address	42-52 Quai de la Rapée, 75012 Paris, France		
Introduction	Setec is a subsidiary of the Setec group, which specializes in infrastructures, industrial buildings and civil engineering works. They focus on the responsibility and motivation of teams through the direct relationship of specialist engineers with its customers.

China Pavilion Oriental Crown in Shanghai Expo

midas Gen

Shanghai, China

Owner	Bureau of Shanghai World Expo Coordination
General Contractor	Shanghai Mechanized Construction Cooperation
Architect	South China University of Technology
Engineering Consultant	South China University of Technology
Construction Period	2007 - 2010
Type of Project	Exhibition Hall
Size of Structure	70m Height

Main features used in this application

- Linear static analysis with finite elements
- Linear dynamic analysis with response spectrum

Description on this project

The China Pavilion is the flagship of the Shanghai Expo pavilions. With 70m tall, it is three times the height of other countries' pavilions and is designed as a permanent structure for Shanghai. The form of the building is based on the traditional Chinese dougong or wooden crossbeam but on a massive scale.

South China University of Technology

Address Room 1224, Building 1, Wushan Campus 381 Wushan Road, Tianhe District, Guangzhou 510641, China

Introduction SCUT is widely recognized as one of the most creative and influential universities in China. Their reputation comes from the University's historical commitment to innovative courses, cross-disciplinary teaching and research, and flexible and high responses to society needs.

Japan Pavilion in Shanghai Expo

midas Gen

Shanghai, China

General Contractor	Takenaka Corporation
Engineering Consultant	Takenaka Corporation
Construction Period	2007 - 2010
Type of Project	Exhibition Hall
Size of Structure	24m Height (3-story)

Main features used in this application

- Irregular geometry generation & auto-mesh with midas FX+
- Linear static analysis with finite elements
- Linear dynamic analysis with response spectrum

Description on this project

The huge 'breathing organism' pavilion situates on a 6,000m² plot. With the 24m height, it is also one of the largest pavilions at Shanghai Expo 2010. The pavilion is divided into past, present and future exhibitions.

Takenaka Corporation

Address 1-13, 4-chome, Hammachi, Chuo-ku, Osaka 541-0053, Japan

Introduction With 20 overseas offices, Takenaka offers comprehensive services worldwide across the entire spectrum of space creation from site location and planning to design and construction as well as post-completion services such as building maintenance.

Sunshine Vale of the Axis (Expo Axis)

midas Gen

Shanghai, China

Owner	Shanghai World EXPO Land Holding
General Contractor	Ministry of Foreign Trade and Economic
Architect	SBA / Hong Li, Bianca Nitsch
Engineering Consultant	Knippers Helbig
Construction Period	2006 - 2010
Type of Project	Exhibition Structure
Size of Structure	45m Height

Main features used in this application

- Irregular geometry generation & auto-mesh with midas FX+
- Linear static analysis with finite elements
- Linear dynamic analysis with response spectrum

Description on this project

The landmark of the Expo Shanghai 2010 is at the central boulevard. It forms the central entrance area and provides 350,000m² effective area for numerous facilities for the exposition. It has a height of 35m and a free projection of 70m. These are called sun valleys direct natural light into the basements. The Expo boulevard is one of five buildings, which remain after the world exposition to form the center of a new urban district of Shanghai in the long run.

Knippers Helbig

Address	75 Broad Street, New York, NY 10004, USA		
Introduction	Knippers Helbig Advanced Engineering is a nationally and internationally consulting engineering practice with a multidisciplinary team of civil and structural engineers, architects and facade engineers. The company offers a comprehensive range of services for structural engineering, facade design and geometric consulting for architecturally challenging building and bridge projects.		
Website	www.knippershelbig.com	Email	newyork@knippershelbig.com

Israel Pavilion in Shanghai Expo

midas Gen

Shanghai, China

Owner	Israel Ministry of Foreign Affairs
Engineering Consultant	YARON-SHIMONI-SHACHAM
Construction Period	Completed in 2010
Type of Project	Exhibition Hall
Size of Structure	24m Height

Main features used in this application

- Irregular geometry generation & auto-mesh with midas FX+
- Linear static analysis with finite elements
- Linear dynamic analysis with response spectrum

Description on this project

The pavilion consists of three areas - Whispering Garden, Hall of Light and Hall of Innovations. The Whispering Garden is a green orchard that greets visitors as they enter the building. The Hall of Light includes a 15m high screen. It displays films highlighting the country's innovations and technological achievements.

YARON-SHIMONI-SHACHAM

Address	38 Hamasger Street P.O.Box 57047 Tel Aviv 61570, Israel		
Introduction	YSS offers extensive experience in a very broad range of civil engineering projects. They are noted for their work in bridges, marine structures, reinforced concrete structures, prestressed concrete and steel structures.

Maeshiba School Gymnasium

midas Gen

Toyohashi, Japan

Architect Ozaki Architects
Engineering Consultant Rhythm Design Mov Co., Ltd.
Construction Period Completed in 2015
Type of Project Gymnasium
Size of Structure 2-story

Main features used in this application

- Linear static analysis with truss elements
- Linear dynamic analysis with response spectrum

Description on this project

The size of the space is 36m x 27m and the short side direction is a three-dimensional gradient three-dimensional truss with beams and a lower chord arches. By forming the keel through the rod material in the center, the force flows in the long side direction. It has a hybrid wooden roof with strong tensile member as steel.

Rhythm Design Mov Co., Ltd.

Address 1-2-21, Kamimaezu, Naka-ku Nagoya-shi, Aichi, 460-0013, Japan
Introduction Rhythm Design Mov Co., Ltd. is a structural design office. They provide an appropriate engineering service for architecture and environment. Also, they have established two offices in Tokyo and Nagoya to get the real information.

Kusanagi Gymnasium / Konohana Arena

midas Gen

Shizuoka, Japan

Owner Shizuoka Prefecture
Architect Naito Architect & Associates
Engineering Consultant KAP
Construction Period 2013 - 2014
Type of Project Gymnasium
Size of Structure 2-story

Main features used in this application

- Steel & RC & timber building design as per Japanese standard
- Boundary nonlinear dynamic analysis with seismic isolation element

Description on this project

It is an integrated athletic park with a series of competition facilities such as an indoor playground, baseball field and space for athletics. The roof is floated in the air by the seismic isolation and the outer circumference is solidified with a strong prestressed concrete ring and the high quality Tenryu Sugi laminated wood. The strong earthquake-resistant brace is placed on the outer shell and the soft space is closed with a large roof of the steel keel.

KAP

Address Chiyoda Fujimi Sky Mansion 1F, 2-4-9 Fujimi, Chiyoda-ku, Tokyo 102-0071, Japan
Introduction KAP is a structural design group for various materials, scales and purposes. They can handle many structure type such as wood, RC, steel, PCa/pc and seismic. Also, they support diverse scales projects from a house to a large-scale government office and civil engineering structures.

Daejeon World Cup Stadium

midas Gen

Daejeon, Korea

Owner	Daejeon City
General Contractor	Hyundai Development and 52 other firms
Engineering Consultant	YOOSHIN Architects & Engineers
Construction Period	1998 - 2001
Type of Project	Sport Stadium
Size of Structure	6-story

Main features used in this application

- Steel truss cantilever elements
- Prestress analysis
- RC frame design as per KCI-USD

Description on this project

It is a soccer-specific stadium located in Daejeon, Korea. It has 40,407 seats and is equipped with the facilities for usage in a variety of sporting and any kind of large scale of events. Also, it's the venue where Korea and Italy played the 2002 FIFA World Cup finals. In 2016, it was named to the K-League Green Stadium.

YOOSHIN Architects & Engineers

Address	Seungjin B/D, 48 Pyeongchondaero 227 beongil, Dongangu, Anyangsi, Gyeonggi-do 14072, Korea		
Introduction	YOOSHIN AE is an architectural practice established in 1978. They have plodded away for over 35 years in the field of architectural design and construction management & supervision, and produced notable projects with commercial and public sector clients.

Jeonju World Cup Stadium

midas Gen

Jeonju, Korea

Owner	Jeonju City
General Contractor	SUNGWON Corporation and 2 other firms
Architect	POS A.C
Engineering Consultant	C-S Structural Engineering
Construction Period	1999 - 2001
Type of Project	Sport Stadium
Size of Structure	7-story

Main features used in this application

- Tension-only truss elements
- Prestress analysis
- Steel frame design as per KSSC-LSD

Description on this project

The unique shape comes from a Korean traditional fan known as Hapjukseon in Korea. This fan represents the beauty of traditional Korean designs. The design of the stadium gives visitors a dramatic feeling as the rows of the stadium seems to blend effortlessly into field.

C-S Structural Engineering

Address	B-#505 Woolmilil \$146-8, Sangdaewon, Jungwon, Seongnam, Gyeonggi 13204, Korea		
Introduction	C-S Structural Engineering is one of the leading architectural engineering consultants in Korea that provides complete systems to comply with local building codes and safety legislation. Their professional architectural engineering consultants have an experience of more than 2 decades.

Seoul World Cup Stadium

midas Gen

Seoul, Korea

Owner	Seoul Metropolitan Facilities Management Corporation
General Contractor	Samsung Engineering
Architect	Choon-soo Ryu, Beyond ce Group
Engineering Consultant	Samsung Engineering and 5 other firms
Construction Period	1998 - 2001
Type of Project	Sport Stadium
Size of Structure	50m Height (7-story)

Main features used in this application

- Tension-only truss elements
- Prestress analysis
- Steel frame design as per KSSC-LSD

Description on this project

The stadium, also known as Sangam Stadium, is located in Seoul, Korea. It was built for the 2002 FIFA World Cup and opened in 2001. It is currently the second largest stadium in Korea after Seoul Olympic Stadium. It's designed to represent the image of a traditional Korean kite.

Samsung Engineering

Address	Samsung GEC, 26, Sangil-ro 6-gil, Gangdong-gu, Seoul 05288, Korea
Introduction	Founded in 1970, Samsung Engineering has grown from a modest engineering firm to a globally recognized name in the EPC market. It has a broadened range of engineering services: Hydrocarbon facilities, power plants, waste treatment plants and industrial production facilities.

Tank with Sloshing

midas Gen

Bergamo, Italy

Owner	Siad S.p.A.
General Contractor	Siad S.p.A.
Engineering Consultant	E.T.S. S.p.A. Engineering and Technical Services
Construction Period	Completed in 2013
Type of Project	Steel Industry Plant
Size of Structure	28,000 Liters

Main features used in this application

- The tank is modeled with triangular and quadrangular mesh. The loads that have been implemented are structural, non structural, thermal, wind, snow and earthquake. A dynamic modal analysis with response spectrum has been performed.

Description on this project

The steel cryogenic tank contains oxygen and is about 12m tall including legs. It has an external diameter of 2.47m. The installation's site is a low seismicity area in northern Italy near to the hinterland of Milan.

E.T.S. S.p.A. Engineering and Technical Services

Address	Via A. Mazzi, 32 - 24018 Villa d'Alme (Bergamo), Italy		
Introduction	Over 25 years, the firm has provided design and site management service with competence and professionalism in every areas of engineering both civil engineering and plants design. They are specialized in Innovative building and construction design in civil, industrial, plants and hospital area as well as main road, highway rails, and tram-line design.

Precast Concrete Hybrid Tower

Palencia, Spain

Owner	Enerpal
General Contractor	Max Bogl
Engineering Consultant	iConcrete / ZENET
Type of Project	Wind Power Plant
Size of Structure	213m Height

midas Gen

Main features used in this application

- Linear dynamic analysis with response spectrum
- General section designer

Description on this project

The wind power plant is built by using precast method. The concrete strength is checked by vibration dynamic analysis in midas Gen. The height is 213m and it is located in Palencia. The large wind power towers measuring up to over 100m in height are crucial significant for efficient wind exploitation and electric power generation. The towers of these dimensions are virtually impossible to realize efficiently with conventional construction methods.

iConcrete / ZENET

Address C / Islas Cíes 73, Bajo Local D 28035, Madrid, Spain

Introduction iConcrete is an engineering company created in 2012 to develop solutions that industrialize the construction with prefabricated concrete. The experience of iConcrete professionals is more than 15 years in the field of engineering, prefabrication, building and civil works.

Gas Pipeline with Venturi Support Tower

midas Gen

Genoa, Italy

Engineering Consultant DAC Ingegneria
Type of Project Steel Industry Plant

Main features used in this application

- Static and dynamic analysis with finite elements
- Mesh generation using midas FX+

Description on this project

In this project, stress analysis of the gas purification line with integrated static and dynamic calculation of the new metallic structures of the existing venturi support towers are performed.

OAC Ingegneria

Address Via Sottoripa, 1A / 121, Genoa, 16124, Italy

Introduction OAC Engineering was born as a choice of integration of the professional experiences of the owners with the aim of dealing with multidisciplinary problems that arise in the complex reality of the design of the plants and the territorial infrastructures.

Raw Meal

midas Gen

Indarung, Indonesia

Owner PT Semen Indonesia
General Contractor PT. PP
Engineering Consultant Partono Fondas Engineering Consultant
Construction Period 2014 - 2016
Type of Project Power Plant
Size of Structure 55m Height

Main features used in this application

- Steel code checking as per BS 5950
- Concrete code design & checking as per BS 8110

Description on this project

PT. Semen Indonesia intends to build the new cement plant in Indarung VI project. This raw meal building is intended to assume the mechanical equipment to process raw material with producing rate of 8,000 ton/day.

Partono Fondas Engineering Consultant

Address Pusat Niaga Roxy Mas Blok C4 No.16 Jl. KH Hasyim Ashari No.125, Jakarta Pusat 10150, Indonesia

Introduction PT. Partono Fondas is one of the most well-known civil engineering consultant in Indonesia, specialized in industrial building and bridge structure design. They have handled many large scaled national projects, ranging from industrial infrastructures to long-spanned cable bridges.

Clinker Storage

midas Gen

Indarung, Indonesia

Owner	Semen Indonesia
General Contractor	PT. PP
Engineering Consultant	Partono Fondas Engineering Consultant
Construction Period	2014 - 2016
Type of Project	Power Plant
Size of Structure	60m Inner diameter, 21m Height

Main features used in this application

- Surface spring supports for mat foundation
- Unit length force result in plate element

Description on this project

PT. Semen Indonesia intends to build the new cement plant in Indarung VI Project. This silo storage is intended to collect and store semi raw material with producing capacity rate of 8,000 ton/day.

Partono Fondas Engineering Consultant

Address Pusat Niaga Roxy Mas Blok C4 No.16 Jl. KH Hasyim Ashari No.125, Jakarta Pusat 10150, Indonesia
